

# Morgan Stanley – Trading Performance & Market Risk Dashboard

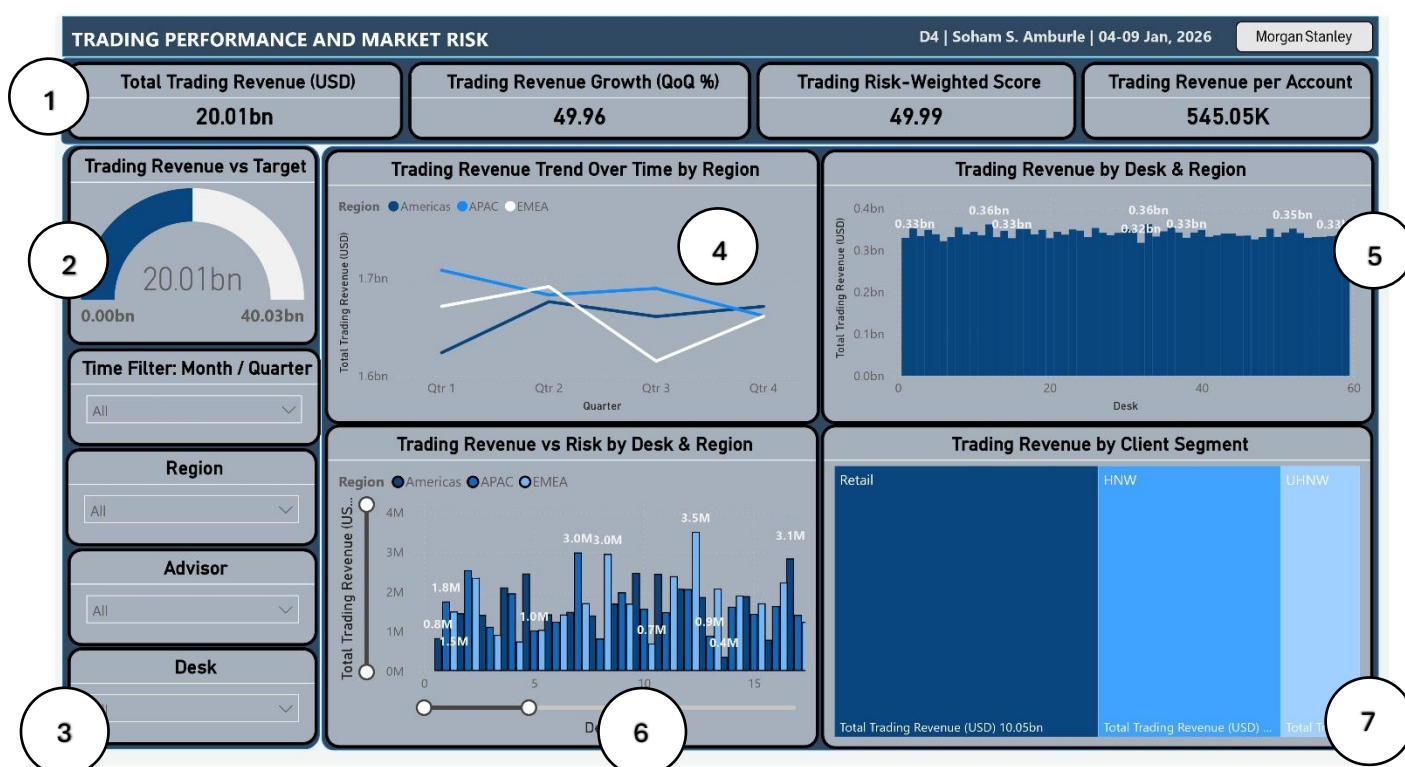

Documentation by Soham S. Amburle | 04 – 09 January 2026

The Trading Performance and Market Risk Dashboard provides a consolidated view of trading revenue, growth trends, desk and regional contributions, client segment performance, and associated risk exposure within the trading business of Morgan Stanley.

Designed in Power BI using a synthetic financial dataset, this dashboard focuses on understanding:

- How trading revenue is generated and evolving over time
- Which desks, regions, or client segments contribute most to trading revenue
- Risk-adjusted performance using weighted AML risk scores
- Efficiency metrics such as revenue per account and progress against revenue targets

The dashboard is intended for trading leadership, regional heads, risk and compliance teams, and strategy stakeholders to monitor trading revenue, risk-adjusted performance, and operational efficiency. Through a combination of executive KPIs, trend analysis, segmentation-based visuals, and risk overlays, it supports informed decision-making and sustainable revenue growth.

## Trading Performance & Market Risk – Executive Storyline

The Trading Performance and Market Risk Dashboard presents a structured narrative of how trading revenue is generated, distributed, and exposed to risk across the organization.

The analysis begins with an executive snapshot of trading performance through four KPI cards

- Total Trading Revenue
- Trading Revenue Growth (QoQ %)
- Trading Risk-Weighted Score
- Trading Revenue per Account

These KPIs establish both the scale of trading revenue and the risk-adjusted efficiency of the trading book. Leadership can instantly understand overall revenue, growth momentum, risk exposure, and revenue efficiency per account.

Next, the dashboard introduces a time-based perspective via a line chart showing trading revenue trends over reporting periods, segmented by region. This highlights revenue growth patterns, seasonal fluctuations, and the relative performance of different regions.

To support a deeper cross-sectional analysis, the dashboard presents revenue by desk and region in a clustered column chart. Leadership can identify top-performing desks, regions driving revenue, and underperforming teams. Another clustered column chart overlays trading revenue with weighted risk, providing a combined performance-risk perspective.

For client-level insights, a treemap visualizes trading revenue by client tier and risk profile. This allows executives to see which client segments are contributing the most to trading revenue and assess their associated risk exposure.

Finally, a gauge visual shows trading revenue against a predefined target, offering an at-a-glance measure of whether the organization is on track to meet its trading revenue goals. All visuals are interactive with slicers for time, region, advisor, and desk, enabling dynamic filtering and drill-down analysis.

Together, these visuals provide a cohesive, risk-adjusted understanding of trading performance, highlighting growth opportunities, risk concentration, and desk-level efficiency.

## **Visuals and Description -**

1. **Cards (KPI Indicators):** These KPIs provide an instant executive-level snapshot of trading performance:
  - **Total Trading Revenue (USD):** Overall revenue generated from trading activities
  - **Trading Revenue Growth (QoQ %):** Quarter-over-quarter growth in trading revenue
  - **Trading Risk-Weighted Score:** AML risk score weighted by trading revenue, showing risk-adjusted exposure
  - **Trading Revenue per Account:** Average revenue contribution per trading account
2. **Gauge:**
  - **Trading Revenue vs Target:** Shows progress toward a pre-defined trading revenue target, highlighting whether revenue goals are achieved
3. **Slicer:** Interactive slicers allow dynamic filtering of all visuals:
  - **Time Filter (Month / Quarter):** Filter by reporting period
  - **Region:** Filter by geography
  - **Advisor:** Filter by individual advisors
  - **Desk:** Filter by trading desk
4. **Trading Revenue Trend Over Time by Region (Line Chart):** Shows temporal evolution of trading revenue across regions, highlighting trends, growth, and seasonal patterns
5. **Trading Revenue by Desk and Region (Clustered Column Charts):** Displays revenue contribution across desks and regions, supporting cross-sectional analysis of top-performing teams
6. **Trading Revenue vs Risk by Desk and Region (Clustered Column Charts):** Combines revenue magnitude with risk exposure, allowing risk-adjusted performance assessment
7. **Trading Revenue by Client Segment (Treemap):** Shows contribution of client tiers and risk profiles to trading revenue, highlighting high-revenue/high-risk segments

The Trading Performance and Market Risk Dashboard delivers a structured, executive-ready view of trading performance, efficiency, and risk. By combining high-level KPIs, revenue trends, desk and region analysis, client segmentation, and risk-adjusted analytics, the dashboard enables stakeholders to:

- Understand where trading revenue is generated
- Assess growth and efficiency of desks and advisors
- Identify high-risk areas that may require supervision
- Make informed, risk-adjusted strategic decisions

With interactive slicers and a balanced mix of summary and analytical visuals, this dashboard supports strategic oversight, risk management, and informed decision-making within Morgan Stanley's trading business.
