

Morgan Stanley – Wealth Management Performance Dashboard

Documentation by Soham S. Amburle | 27-30 December 2025

The Wealth Management Performance Dashboard provides a comprehensive view of Assets Under Management (AUM), client segmentation, advisor performance, and revenue generation within a global wealth management context.

Designed in Power BI using a large synthetic financial dataset, this dashboard focuses on understanding how wealth is distributed across client tiers, how client money flows over time, and how effectively advisors and segments contribute to overall business performance.

The dashboard is intended for wealth management leadership, regional heads, and analytics teams to monitor AUM growth, client behavior, revenue contribution, and advisor productivity. With clear KPI indicators, trend analysis, and segmentation-based visuals, it supports data-driven decision-making and strategic planning across regions.

Wealth Management Performance – Executive Storyline

The Wealth Management Performance Dashboard presents a structured view of how assets, clients, advisors, and revenue interact within a global wealth management business. The analysis begins with an executive snapshot of total AUM, net client flows, revenue, and active clients, establishing the overall scale and momentum of the organization.

The dashboard then introduces geographic context through regional filtering, allowing leaders to assess both global performance and regional variations. Client segmentation follows, showing how assets are distributed across Retail, HNWN, and UHNWN clients and how each segment contributes to overall wealth.

Trend analysis adds a time-based perspective, highlighting how AUM within each client tier evolves and where sustained growth or volatility exists. The average AUM per client further refines this view by indicating client quality and portfolio depth.

Advisor-level performance is then introduced to identify top contributors and support accountability. Finally, client behavior and monetization are analyzed through net flows and fee revenue by client tier, linking asset movement directly to business outcomes.

Together, these insights provide leadership with a coherent understanding of where wealth is concentrated, how it is changing, and which clients and advisors are driving long-term value.

Visuals and Description -

1. **Cards (KPI Indicators):** These KPIs provide an instant executive-level snapshot of wealth management performance:
 - **Total AUM (USD):** Overall assets under management across all clients
 - **Net Client Flows (USD):** Net inflow or outflow of client funds over the selected period
 - **Wealth Management Revenue:** Total revenue generated from wealth management activities
 - **Active Wealth Clients:** Count of currently active wealth management clients
2. **Slicer:**
 - **Region:** Enables users to filter the dashboard by geographic region or view global performance, allowing both regional and enterprise-wide analysis.
3. **AUM Distribution by Client Tier (Donut Chart):** Displays how total AUM is distributed across different client tiers (Retail, HNW, UHNW). This visualization highlights client concentration, portfolio mix, and the relative importance of each segment in terms of managed assets.
4. **AUM Trend by Client Tier (Line Chart):** Shows the trend of AUM over time segmented by client tier. This chart helps identify growth patterns, volatility, and long-term performance differences between Retail, High Net Worth, and Ultra High Net Worth clients.
5. **Average AUM per Client (Gauge):** Represents the average assets managed per client compared against a defined benchmark range. This provides a quick indication of client portfolio quality and overall wealth depth.
6. **Top 10 Advisors by AUM (Bar Chart):** Ranks the top-performing advisors based on the total AUM they manage. This visual supports performance monitoring, advisor benchmarking, and identification of key contributors within the wealth management business.
7. **Net Client Flows by Client Tier (Column Chart):** Illustrates net inflows and outflows across client tiers. This chart helps assess client sentiment, retention, and investment behavior across different wealth segments.
8. **Fee Revenue by Client Tier (Column Chart):** Shows total fee revenue generated by each client tier. It highlights revenue contribution, monetization efficiency, and the commercial importance of different client segments.

The Wealth Management Performance Dashboard delivers a clear, structured, and executive-friendly view of wealth management operations.

By combining high-level KPIs, client segmentation, trend analysis, and advisor performance metrics, the dashboard enables stakeholders to understand where assets are concentrated, how client wealth is evolving, and which segments and advisors are driving value.

With interactive regional filtering and a balanced mix of summary and detailed visuals, this dashboard supports strategic oversight and informed decision-making within a global wealth management organization..
