

Morgan Stanley – Client Profitability & Lifecycle Analysis Dashboard

Documentation by Soham S. Amburle | 10 – 15 January 2026

The Client Profitability and Lifecycle Analysis Dashboard provides a comprehensive view of client-level financial performance, cost efficiency, profitability quality, and lifecycle trends across Morgan Stanley's client base.

Designed in Power BI using a synthetic financial dataset, this dashboard focuses on understanding:

- How profitable different client segments are after accounting for servicing costs
- Which client tiers, regions, and risk profiles drive sustainable profitability
- How client profitability evolves over time as part of the client lifecycle
- Whether higher-risk clients are delivering proportionally higher returns

The dashboard is intended for senior leadership, wealth management heads, strategy teams, relationship managers, and operations stakeholders to monitor client-level economics, identify high-value segments, and support data-driven client strategy decisions.

Through a combination of executive KPIs, segmentation-based analysis, lifecycle trends, and interactive drill-downs, the dashboard enables a profit-focused and lifecycle-aware view of the client portfolio.

Client Profitability & Lifecycle – Executive Storyline

The Client Profitability and Lifecycle Analysis Dashboard presents a structured narrative of how revenue, cost, and profit interact across Morgan Stanley's client base and how these dynamics change across segments and time.

The analysis begins with an executive snapshot of client profitability through five KPI cards:

- Total Revenue
- Total Cost to Serve
- Net Client Profit
- Average Revenue per Client

- Client Profit Margin (%)

Together, these KPIs establish both the scale and quality of client earnings. Leadership can immediately understand overall revenue generation, servicing cost burden, net profitability, revenue efficiency per client, and margin sustainability within the selected business context.

Next, the dashboard introduces a risk-aware profitability perspective through a scatter plot mapping Net Client Profit against Client Risk Profile, with bubble size representing Assets Under Management (AUM) and color segmentation by Client Tier. This visual enables executives to identify:

- High-profit, low-risk clients (ideal growth targets)
- High-profit, high-risk clients (requiring supervision)
- Low-profit or loss-making segments that may require strategic reassessment

To support clearer segment-level comparison, a bar chart displays Net Client Profit by Client Tier, allowing leadership to quickly identify which tiers contribute the most to overall profitability after costs. This provides a clear basis for prioritizing advisor focus and resource allocation.

The dashboard then introduces a lifecycle dimension through a line chart showing Net Client Profit trends over time. This visual highlights whether client profitability is improving, stagnating, or deteriorating, enabling leadership to assess the sustainability of earnings and detect early warning signals.

A donut chart further complements the analysis by showing Revenue Contribution by Client Tier, offering an at-a-glance view of revenue concentration and dependency across segments. This helps assess whether profitability is diversified or overly reliant on specific client tiers.

Interactive slicers for Reporting Month, Region, Client Tier, and Risk Profile allow users to dynamically filter all visuals, enabling tailored analysis by geography, segment, risk appetite, and time period.

Together, these visuals deliver a cohesive and executive-ready view of client profitability, efficiency, risk alignment, and lifecycle evolution, supporting informed, profit-focused decision-making.

Visuals and Description -

1. **Cards (KPI Indicators):** These KPIs provide an instant executive-level snapshot of client profitability:
 - **Total Revenue (USD):** Total revenue generated across the selected client base
 - **Total Cost to Serve (USD):** Aggregate servicing cost associated with clients
 - **Net Client Profit (USD):** Revenue minus cost to serve, representing true profitability
 - **Average Revenue per Client (USD):** Revenue efficiency at the individual client level
 - **Client Profit Margin (%):** Percentage of revenue retained as profit after costs
2. **Slicer:** Interactive slicers allow dynamic filtering of all visuals:
 - **Reporting Month:** Lifecycle and time-based analysis
 - **Region:** Geographic segmentation
 - **Client Tier:** Client segmentation (e.g., Mass, HNW, UHNW)
 - **Risk Profile:** Risk-based profitability assessment
3. **Client Profitability vs Risk (Scatter Plot):** Maps Net Client Profit against Risk Profile, with bubble size representing AUM and color by Client Tier, enabling identification of high-value and high-risk client segments.
4. **Net Client Profit by Client Tier (Bar Chart):** Compares profitability across client segments, highlighting which tiers deliver the highest net value after servicing costs.
5. **Net Client Profit Trend Over Time (Line Chart):** Shows the temporal evolution of client profitability, supporting lifecycle and sustainability analysis.
6. **Revenue Contribution by Client Tier (Donut Chart):** Displays revenue concentration across client tiers, highlighting dependency and diversification patterns.

The Client Profitability and Lifecycle Analysis Dashboard enables Morgan Stanley stakeholders to:

- Understand true client profitability after accounting for servicing costs
- Identify high-value and underperforming client segments
- Assess whether risk-taking is appropriately rewarded
- Monitor profitability trends across the client lifecycle

- Support data-driven client strategy, advisor focus, and resource allocation

By combining executive KPIs, risk-aware profitability analysis, lifecycle trends, and interactive segmentation, this dashboard delivers a strategic, profit-centric view of the client portfolio, aligned with Morgan Stanley's focus on sustainable growth and disciplined risk management.
