

Morgan Stanley – Compliance, AML, and Operational Risk

Documentation by Soham S. Amburle | 22 – 24 January 2026

The Compliance, AML and Operational Risk Dashboard provides a comprehensive view of compliance incidents, AML risk, high-risk client concentration, and operational cost exposure across Morgan Stanley's client base. Using a synthetic financial dataset, the dashboard focuses on monitoring compliance trends, assessing AML risk, identifying high-risk clients, and evaluating operational cost as a proxy for operational risk. Designed in Power BI, this dashboard is intended for senior leadership, risk and compliance teams, operational managers, and strategy stakeholders to monitor risk patterns, enforce compliance oversight, and support data-driven decision-making aimed at mitigating operational and regulatory risks.

Through a combination of executive KPI cards, trend lines, scatter-based risk analysis, bar charts, and a gauge visual, the dashboard delivers actionable insights into compliance performance, AML exposure, high-risk client identification, and operational cost efficiency.

Compliance, AML and Operational Risk – Executive Storyline

The dashboard presents a clear narrative of how compliance incidents, AML risk, high-risk client concentration, and operational cost exposure interact across client segments, tiers, regions, and risk profiles, highlighting trends, hotspots, and potential areas of regulatory or operational concern.

The analysis begins with an executive snapshot using five KPI cards:

- **Total Compliance Incidents:** Captures the total number of reported compliance issues within the selected context, providing an immediate measure of compliance exposure.
- **% Accounts w/ Incidents:** Measures the share of accounts impacted by compliance events, contextualizing total incident volume.
- **Avg AML Risk Score:** Indicates the average AML risk across clients, serving as a risk-adjusted measure of client exposure.
- **High-Risk Clients:** Counts clients with elevated AML risk scores (≥ 75), highlighting those requiring focused oversight.
- **Avg Cost to Serve:** Represents the mean operational cost per account, serving as a proxy for operational risk and efficiency.

The dashboard presents a clear narrative of how compliance incidents, AML risk, high-risk client concentration, and operational cost exposure interact across client segments, tiers, regions, and risk profiles, highlighting trends, hotspots, and potential areas of regulatory or operational concern.

Visuals and Description -

1. **Cards (KPI Indicators):** Five cards provide a high-level overview of compliance and operational risk metrics:
 - **Total Compliance Incidents:** Shows total reported compliance issues
 - **% Accounts w/ Incidents:** Displays the proportion of affected accounts
 - **Avg AML Risk Score:** Visualizes average AML risk score
 - **High-Risk Clients:** Highlights number of clients with elevated AML risk
 - **Avg Cost to Serve:** Indicates operational cost per account
2. **Slicers:** Enable dynamic filtering of all visuals by:
 - **Reporting Month:** Track trends over time
 - **Client Tier:** Segment analysis by client classification
 - **Region:** Geographic segmentation of compliance and risk
 - **Risk Profile:** Assess risk-adjusted metrics across client risk tiers
 - **Desk:** Evaluate performance or risk by trading/advisory desks
3. **Operational Cost Gauge (Gauge):** Displays average cost to serve per account, comparing actual vs target levels, with conditional color ranges to indicate efficiency and operational risk exposure.
4. **Compliance Incidents Trend (Line Chart):** Visualizes the month-over-month shifts in compliance incident volume, enabling identification of trends, early warning signals, and potential systemic issues.
5. **Compliance Incidents by Region (Bar Chart):** Highlights which geographies generate the most compliance incidents, revealing regional hotspots for targeted compliance oversight.
6. **AML Risk vs Revenue Exposure (Scatter Plot):** Maps client-level AML risk against total revenue, with bubble size optionally representing AUM. This visual identifies high-risk, high-impact clients and low-risk clients, supporting risk-adjusted management decisions.
7. **Compliance Incidents by Client Tier (Bar Chart):** Shows the distribution of compliance incidents across client segments, enabling identification of tier-specific risk concentration and supporting operational focus.

This dashboard enables Morgan Stanley stakeholders to:

- Monitor compliance incidents and AML risk trends over time
- Identify high-risk clients and segments requiring proactive oversight
- Understand geographic and tier-level concentration of compliance issues
- Evaluate operational cost exposure as a measure of operational efficiency and risk
- Make data-driven decisions to mitigate regulatory, compliance, and operational risks

By combining executive KPIs, trend analysis, segmentation, scatter-based risk visuals, bar charts, and a gauge, the dashboard provides a comprehensive, executive-ready view of compliance, AML, and operational risk that drives actionable insights for leadership, risk teams, and operational managers.
