

Morgan Stanley – Client-Level Drill-Through Analytics Dashboard

Documentation by Soham S. Amburle | 25 – 28 January 2026

The Client-Level Drill-Through Analytics Dashboard provides a detailed view of individual client performance, revenue composition, AUM, net flows, profitability, and engagement across Morgan Stanley's client base. Using a synthetic financial dataset, the dashboard focuses on monitoring client revenue trends, assessing revenue sources, tracking asset movements, and evaluating client satisfaction through NPS scores.

Designed in Power BI, this dashboard is intended for senior leadership, relationship managers, wealth management heads, and strategy teams to gain granular client insights, support personalized client engagement strategies, and enable data-driven decisions for client retention, profitability, and advisor performance.

Through a combination of executive KPI cards, line and column charts, pie charts, slicers, and a gauge visual, the dashboard delivers actionable insights into client revenue evolution, asset growth, net flows, revenue breakdown, and client satisfaction.

Client-Level Drill-Through – Executive Storyline

The dashboard presents a clear narrative of how individual client revenue, asset allocation, net flows, and satisfaction interact across client segments, tiers, regions, and risk profiles, highlighting trends, engagement health, and client-specific opportunities.

The analysis begins with an executive snapshot using six KPI cards:

- **Total Revenue (USD):** Captures overall revenue for the selected client, providing an immediate measure of financial contribution.
- **Total AUM (USD):** Indicates assets under management for the client, reflecting portfolio size.
- **Net Flows (USD):** Tracks net capital inflows and outflows, showing client activity and confidence.
- **Fee Revenue (USD):** Highlights revenue generated through fees, providing insight into recurring income.
- **Trading Revenue (USD):** Captures revenue generated from trading activities, reflecting transactional engagement.
- **Average NPS Score:** Measures client satisfaction, identifying engagement health and potential churn risk.

This setup ensures stakeholders can quickly understand client performance, asset dynamics, revenue composition, and satisfaction before diving into deeper analysis.

Visuals and Description -

1. **Cards (KPI Indicators):** Six cards provide an executive snapshot of client performance:
 - a. **Total Revenue (USD)**
 - b. **Total AUM (USD)**
 - c. **Net Flows (USD)**
 - d. **Fee Revenue (USD)**
 - e. **Trading Revenue (USD)**
 - f. **Average NPS Score**
2. **Slicers:** Enable dynamic filtering of all visuals by:
 - a. **Reporting Month:** Track trends over time
 - b. **Region:** Segment analysis geographically
 - c. **Client Tier:** Evaluate client performance across tiers
 - d. **Risk Profile:** Assess risk-adjusted revenue and asset trends
 - e. **Advisor:** Focus on individual advisor contributions
3. **Client Satisfaction Gauge (Gauge):** Provides a visual representation of average NPS score, enabling rapid assessment of client engagement and satisfaction health, with color-coded ranges indicating at-risk or healthy clients.
4. **Revenue Trend (Line Chart):** Visualizes month-over-month total revenue for the selected client, enabling identification of growth patterns, fluctuations, and potential opportunities for engagement or intervention.
5. **Net Flows vs AUM (Clustered Column Chart):** Displays total AUM and net flows side-by-side over time, allowing stakeholders to track asset growth, client activity, and portfolio momentum.
6. **Revenue Breakdown by Source (Pie Chart):** Shows Fee, Trading, and Investment Banking Revenue contributions to total client revenue, providing insight into revenue composition and dependency on specific business lines.

This dashboard enables Morgan Stanley stakeholders to:

- Monitor client-level revenue, asset growth, and net flows over time
- Evaluate revenue composition and profitability sources
- Understand advisor contribution and client engagement trends
- Track client satisfaction and identify at-risk clients using NPS scores
- Make data-driven decisions for client retention, personalized engagement, and resource allocation

By combining executive KPIs, trend analysis, pie and column charts, slicers, and a gauge, the dashboard provides a comprehensive, executive-ready view of individual client performance, supporting actionable insights for leadership, relationship managers, and strategy teams.
