

Morgan Stanley – Advisor & Desk Productivity Dashboard

Documentation by Soham S. Amburle | 15 – 17 January 2026

The Advisor & Desk Productivity Dashboard provides a structured view of advisor- and desk-level performance across Morgan Stanley. Using a synthetic financial dataset, the dashboard focuses on revenue generation, AUM management, net flows, cost efficiency, and overall productivity of advisors and desks.

Designed in Power BI, this dashboard is intended for senior leadership, operations managers, wealth management heads, strategy teams, and relationship managers to monitor advisor and desk performance, allocate resources effectively, and make data-driven operational and strategic decisions.

Through a combination of executive KPI cards, comparative bar charts, scatter plots, trend analyses, interactive gauges, and slicers, this dashboard delivers actionable insights into productivity, efficiency, and performance trends.

Advisor & Desk Productivity – Executive Storyline

The Advisor & Desk Productivity Dashboard presents a clear narrative of how revenue, AUM, net flows, and costs interact at the advisor and desk levels, while also showing trends over time and across client segments.

The analysis begins with an executive snapshot of advisor and desk productivity using five KPI cards:

- **Total Revenue (USD):** Total revenue generated by all advisors in the selected context
- **Revenue per Advisor (USD):** Average revenue generated per advisor, highlighting individual performance
- **AUM per Advisor (USD):** Average assets under management per advisor
- **Cost-to-Revenue Ratio (%):** Efficiency metric showing cost of serving clients relative to revenue generated
- **Average Net Flows per Advisor (USD):** Advisor cash generation efficiency

Together, these KPIs establish a baseline understanding of scale, efficiency, and revenue productivity, allowing leadership to immediately assess advisor and desk performance.

Next, the dashboard introduces advisor-level revenue comparisons through a bar chart, Revenue by Advisor, which highlights top-performing advisors. This visual allows executives to quickly identify high-value advisors and understand the distribution of revenue generation across the advisory team.

A complementary bar chart, Revenue by Desk, provides a desk-level performance view, highlighting which desks are generating the most revenue and allowing comparisons by client tier. This supports resource allocation, operational planning, and desk-level productivity assessment.

The dashboard then presents advisor productivity analysis through a scatter plot, Advisor Productivity (AUM vs Revenue):

- **X-axis:** AUM per Advisor
- **Y-axis:** Revenue per Advisor
- **Bubble size:** Cost-to-Serve per Advisor
- **Color:** Client Risk Profile

This visual enables identification of efficient advisors, outliers, and advisors with high revenue but high servicing costs, providing insight into operational effectiveness and cost management.

A line chart, Total Revenue Over Time by Desk, introduces a temporal perspective, showing revenue trends across desks over reporting periods. This highlights desks with improving, declining, or stable revenue, supporting trend analysis and lifecycle performance assessment.

To provide a quick performance benchmark, a gauge, Net Flows per Advisor vs Target, visually shows whether advisors are meeting cash generation targets, with color-coded ranges to indicate underperformance or overachievement.

Finally, interactive slicers allow dynamic filtering of all visuals, enabling tailored analysis by:

- **Reporting Period:** Month, Quarter, Year
- **Region:** Geographic segmentation
- **Desk:** Desk-level analysis
- **Client Tier:** Client segment filtering
- **Risk Profile:** Risk-adjusted productivity analysis

Together, these visuals deliver a cohesive, executive-ready view of advisor and desk productivity, efficiency, and performance trends, supporting informed, data-driven decision-making.

Visuals and Description -

1. **Cards (KPI Indicators):** Five cards provide an executive snapshot of advisor and desk performance:
 - **Total Revenue (USD):** Represents the aggregate revenue generated by all advisors and desks within the selected filters, providing a measure of overall business scale.
 - **Revenue per Advisor (USD):** Indicates the average revenue contribution per advisor, enabling comparison of individual advisor productivity and revenue efficiency.
 - **AUM per Advisor (USD):** Shows the average assets under management handled by each advisor, reflecting portfolio size and advisor capacity.
 - **Cost-to-Revenue Ratio (%):** Measures operational efficiency by comparing total servicing costs against revenue generated, highlighting cost discipline and profitability quality.
 - **Average Net Flows per Advisor (USD):** Captures the average net client inflows or outflows managed by each advisor, serving as a key indicator of advisor-led client growth and retention.
2. **Slicer:** Interactive slicers allow dynamic filtering of all visuals:
 - **Reporting Period:** Month, Quarter, Year
 - **Region:** Geographic segmentation
 - **Desk:** Desk-level filtering
 - **Client Tier:** Client segmentation
 - **Risk Profile:** Risk-adjusted productivity
3. **Revenue by Advisor (Bar Chart):** Displays revenue generated by each advisor, highlighting top performers.
4. **Revenue by Desk (Bar Chart):** Compares revenue across desks, highlighting desk-level contributions and client-tier mix.
5. **Advisor Productivity (Scatter Plot):** Plots AUM per Advisor against Revenue per Advisor, with bubble size representing Cost-to-Serve and color indicating Risk Profile, highlighting efficiency and outliers.
6. **Total Revenue Over Time by Desk (Line Chart):** Shows revenue trends across desks over reporting periods, enabling trend analysis.
7. **Net Flows per Advisor vs Target (Gauge):** Provides a quick visual check of advisor net cash generation relative to target, with color-coded performance ranges.

The Advisor & Desk Productivity Dashboard enables Morgan Stanley stakeholders to:

- Monitor advisor and desk-level revenue generation, AUM management, and net flows
- Identify top-performing and underperforming advisors and desks
- Track cost-efficiency through the Cost-to-Revenue ratio
- Analyze trends over time to inform operational and strategic planning
- Support data-driven decisions regarding resource allocation, desk focus, and advisor coaching

By combining KPIs, comparative visuals, trend lines, scatter analysis, gauges, and interactive slicers, this dashboard delivers a comprehensive, actionable view of advisor and desk productivity, supporting operational efficiency, performance optimization, and strategic oversight.
