

Morgan Stanley – Investment Banking Revenue & Deal Pipeline Dashboard

Documentation by Soham S. Amburle | 30 December 2025 – 03 January 2026

The Investment Banking Revenue & Deal Pipeline Dashboard provides a consolidated view of investment banking revenue performance, growth trends, client composition, geographic contribution, and associated risk exposure within a global investment banking context.

Designed in Power BI using a large synthetic financial dataset, this dashboard focuses on understanding how investment banking revenue is generated, how it evolves over time, how it is distributed across regions and client tiers, and whether high revenue areas are accompanied by elevated compliance and AML risk.

The dashboard is intended for investment banking leadership, regional heads, risk and compliance teams, and strategy stakeholders to monitor revenue momentum, concentration risk, client dependence, and risk-adjusted performance. Through a combination of executive KPIs, trend analysis, segmentation-based visuals, and risk overlays, it supports informed decision-making and sustainable revenue management across the investment banking business.

Investment Banking Revenue & Deal Pipeline – Executive Storyline

The Investment Banking Revenue & Deal Pipeline Dashboard presents a structured narrative of how investment banking revenue is generated, distributed, and exposed to risk across the organization.

The analysis begins with an executive snapshot of total investment banking revenue, its contribution to overall firm revenue, average revenue per client, and revenue volatility, establishing both the scale and stability of the investment banking business.

The dashboard then introduces a time-based perspective, showing how investment banking revenue evolves across reporting periods. This trend analysis highlights growth momentum, cyclicity, and potential early warning signals related to market conditions or deal activity.

Geographic decomposition follows, allowing leadership to understand how revenue is distributed across regions and identify concentration risk or underperforming markets. Client segmentation is then layered in to show which client tiers drive investment banking revenue and how revenue reliance varies across segments.

To provide a clearer view of revenue composition, a proportional breakdown illustrates the relative contribution of each client tier, supporting rapid assessment of client concentration and diversification.

Finally, the dashboard incorporates a risk lens, plotting investment banking revenue against AML risk exposure. This visualization enables leadership to identify high-revenue areas that may require enhanced oversight and to distinguish between sustainable, low-risk revenue streams and revenue that carries elevated compliance risk.

Together, these insights provide a cohesive understanding of where investment banking revenue comes from, how it is changing, and whether it is being generated in a stable and compliant manner.

Visuals and Description -

1. **Cards (KPI Indicators):** These KPIs provide an instant executive-level snapshot of investment banking performance:
 - **Total Investment Banking Revenue (USD):** Overall revenue generated from investment banking activities
 - **IB Revenue Contribution:** Percentage contribution of investment banking revenue to total firm revenue
 - **Average IB Revenue per Client:** Mean investment banking revenue generated per client
 - **IB Revenue Volatility:** Standard deviation of investment banking revenue, indicating revenue stability and risk
2. **Slicer:**
 - **Year & Quarter:** Enables time-based filtering to analyze revenue performance across reporting periods
 - **Client Tier:** Allows comparison of investment banking revenue across different client segments
 - **Region:** Supports geographic analysis and regional performance evaluation
3. **IB Revenue Mix by Client Tier (Donut Chart):** Displays the proportional distribution of investment banking revenue across client tiers. This visualization highlights revenue concentration, client dependency, and the relative importance of each segment within the investment banking business.
4. **Investment Banking Revenue Trend (Line Chart):** Shows the evolution of investment banking revenue over time. This chart helps identify growth patterns, revenue volatility, and shifts in deal activity across reporting periods.
5. **Investment Banking Revenue by Region (Clustered Bar Chart):** Breaks down total investment banking revenue by geographic region. This visual enables leadership to identify strong and weak regions, assess geographic concentration risk, and compare regional contributions.
6. **IB Revenue by Client Tier (Stacked Column Chart):** Illustrates investment banking revenue by client tier, segmented by region. This chart combines client and geographic perspectives to highlight how different segments contribute to regional revenue performance.
7. **Investment Banking Revenue vs AML Risk (Scatter Plot):** Plots investment banking revenue against average AML risk scores, with bubble size representing total AUM. This visualization provides a risk-adjusted view of revenue generation, helping identify high-revenue areas that may carry elevated compliance or regulatory risk.

The Investment Banking Revenue & Deal Pipeline Dashboard delivers a clear, structured, and executive-ready view of investment banking performance.

By combining high-level KPIs, revenue trends, regional and client segmentation, proportional revenue composition, and risk-aware analytics, the dashboard enables stakeholders to understand how investment banking revenue is generated, how resilient it is, and where risk-adjusted opportunities or concerns exist.

With interactive filtering and a balanced mix of summary and analytical visuals, this dashboard supports strategic oversight, risk management, and informed decision-making within a global investment banking organization.
