

Morgan Stanley – Client Experience and Engagement Dashboard

Documentation by Soham S. Amburle | 21 – 22 January 2026

The Client Experience and Engagement Dashboard provides a comprehensive and strategic view of client sentiment, complaints, and risk-related experience indicators at Morgan Stanley. Using a synthetic financial dataset, the dashboard focuses on client satisfaction, engagement quality, high-risk client detection, and operational effectiveness. Designed in Power BI, this dashboard is intended for senior leadership, relationship managers, client experience teams, risk and compliance officers, and strategy stakeholders to evaluate client experience health, identify early warning signals, and support data-driven decisions aimed at improving client satisfaction and retention.

Through a combination of executive KPI cards, trend lines, scatter-based risk analysis, bar and pie composition charts, and interactive slicers, the dashboard delivers actionable insights into client experience, engagement patterns, and potential areas of service improvement.

Client Experience and Engagement – Executive Storyline

The dashboard presents a clear narrative of how client sentiment, complaints, and engagement risk interact across client segments, tiers, regions, and risk profiles, highlighting trends, hotspots, and potential threats to client retention.

The analysis begins with an executive snapshot of client experience using six KPI cards:

- **Average NPS Score:** Captures the mean client Net Promoter Score within the selected context, providing an immediate measure of overall client satisfaction.
- **Total Complaints:** Aggregates all complaints lodged by clients, giving leadership insight into service friction volume.
- **Complaints Rate (%):** Measures the share of clients affected by complaints, contextualizing total complaint volume.
- **High-Risk Experience Rate:** Identifies the proportion of clients who either have low NPS or at least one complaint, representing clients at risk of dissatisfaction-driven churn.
- **Complaints per Client:** Indicates the intensity of complaints among clients, revealing concentrated service issues.
- **Detractor Rate:** Highlights the proportion of clients with negative sentiment regardless of whether they have formally complained, offering an early warning signal for retention risk.

Together, these KPIs establish a baseline understanding of overall client satisfaction, engagement intensity, and high-risk client segments, enabling leadership to quickly assess the health of client experience across the organization.

Visuals and Description -

1. **Cards (KPI Indicators):** Six cards provide a high-level overview of client experience metrics:
 - **Average NPS Score:** Shows the mean client satisfaction across the selected context
 - **Total Complaints:** Represents the total volume of client complaints logged
 - **Complaints Rate (%):** Indicates the percentage of clients who have submitted at least one complaint
 - **High-Risk Experience Rate:** Captures the share of clients at risk due to low NPS or complaints
 - **Complaints per Client:** Measures the average number of complaints per client, highlighting concentration of service issues
 - **Detractor Rate:** Displays the percentage of clients with negative NPS scores, signalling potential churn risk
2. **Slicer:** Enable dynamic filtering of all visuals by:
 - **Reporting Month:** Track trends over time
 - **Client Tier:** Segment analysis by client classification
 - **Region:** Geographic segmentation of client experience
 - **Risk Profile:** Assess risk-adjusted experience across different client risk appetites
3. **Client Distribution by NPS Category (Pie Chart):** Provides a composition view of Promoters, Passives, and Detractors, enabling leadership to quickly gauge the proportion of satisfied versus at-risk clients.
4. **NPS Trend Over Time (Line Chart):** Tracks average NPS month-to-month, highlighting improvements or deterioration in client satisfaction over time and enabling early intervention in negative trends.
5. **Complaints by Client Tier (Bar Chart):** Visualizes the total complaints aggregated by client tier, identifying segments generating the most service friction and highlighting areas for operational focus.
6. **NPS vs Complaints (Client-Level View) (Scatter Plot):** Maps individual clients' NPS against complaint counts, with bubble size optionally representing AUM. This visual identifies silent detractors, critical risk clients, and areas of opportunity for targeted engagement strategies.

The Client Experience and Engagement Dashboard enables Morgan Stanley stakeholders to:

- Assess overall client satisfaction and engagement quality through aggregated KPIs.
- Identify clients at risk of churn due to negative sentiment or high complaint volume.
- Monitor trends over time, detecting early signals of dissatisfaction.
- Evaluate segment-specific issues, including client tier, region, and risk profile.
- Prioritize operational interventions for segments driving complaints or exhibiting high dissatisfaction.
- Support strategic CX initiatives and resource allocation to improve client retention and loyalty.

By combining executive KPIs, trend analysis, segmentation, risk-based scatter plots, composition charts, and interactive slicers, this dashboard provides a comprehensive and executive-ready view of client experience that drives actionable insights for leadership, client relationship management, and strategy teams.
